

QWorld Quantum Summer School 2021

Installation instructions

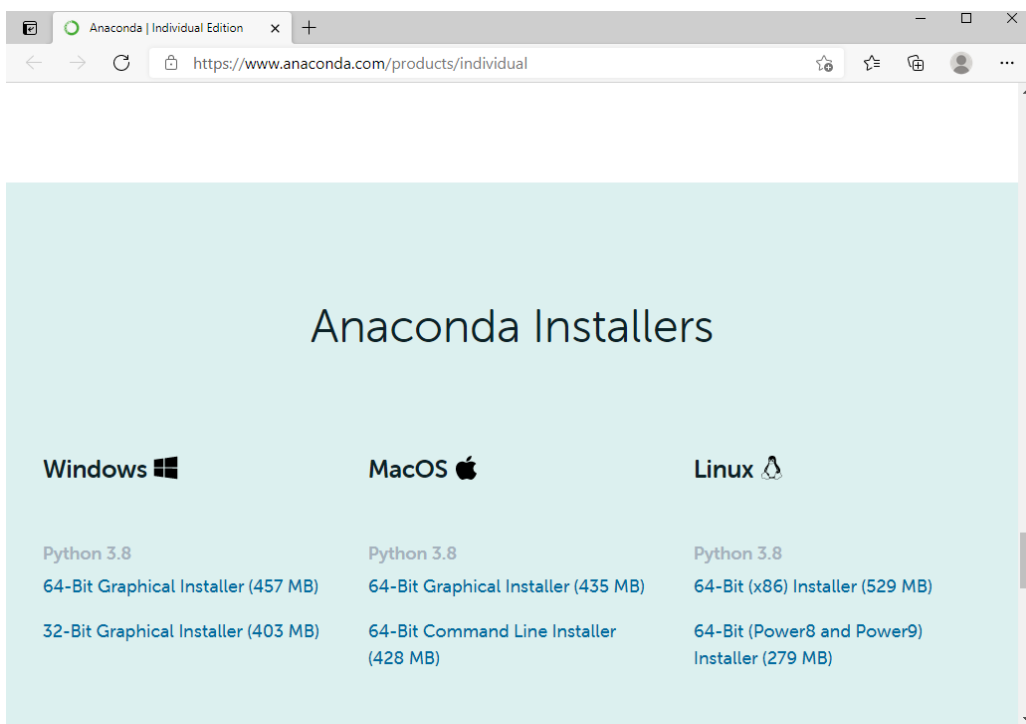

You will need to install *Jupyter Notebook* to read and run the material that will be used in the workshop. If you are an expert, you can skip some or all of the sections below.

Installation of *Jupyter Notebook*

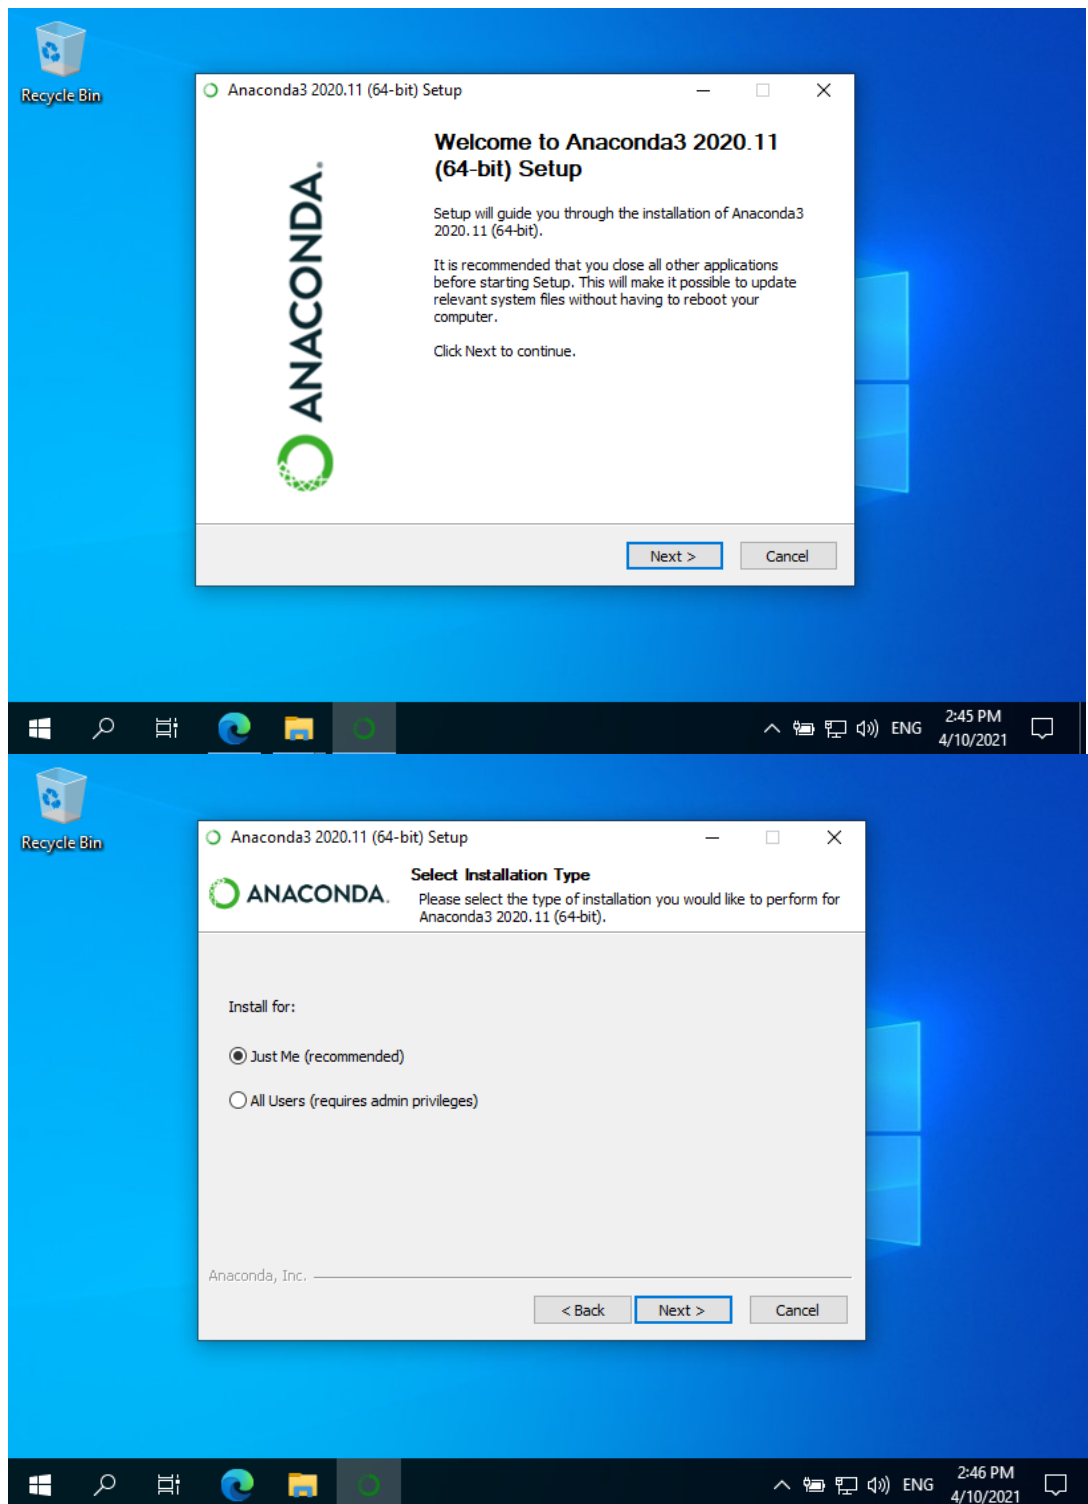

We recommend using *Anaconda* to install *Jupyter Notebook*.

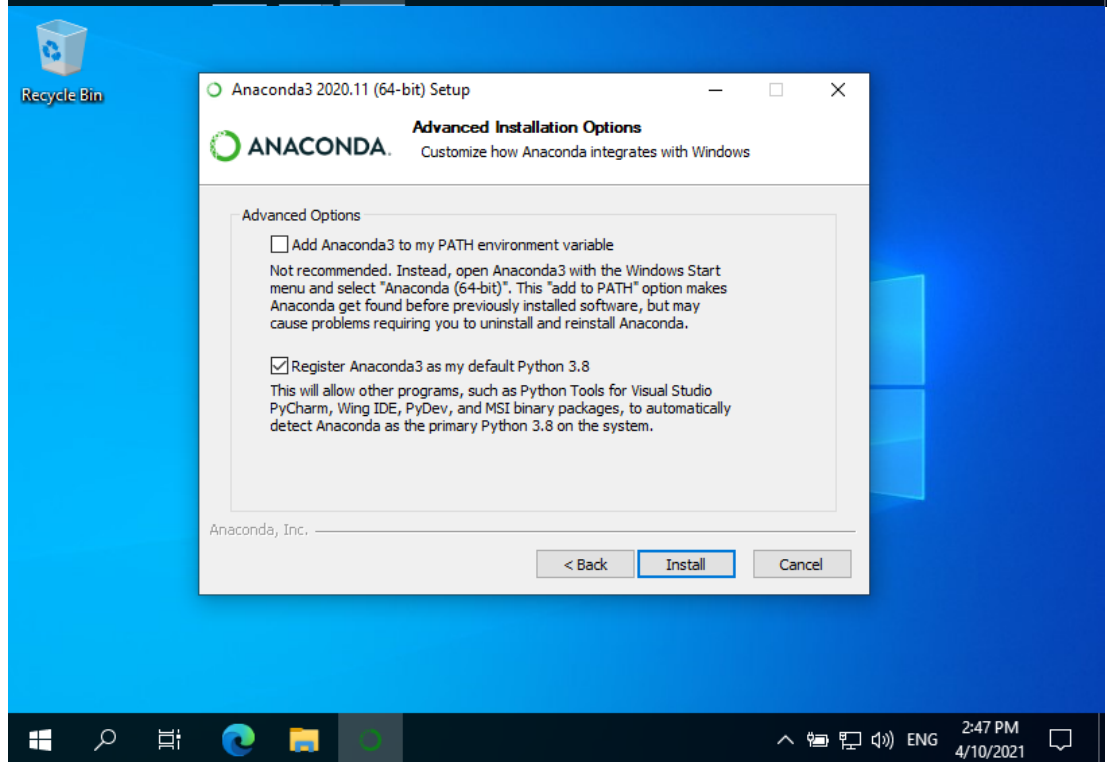

Installing *Anaconda*

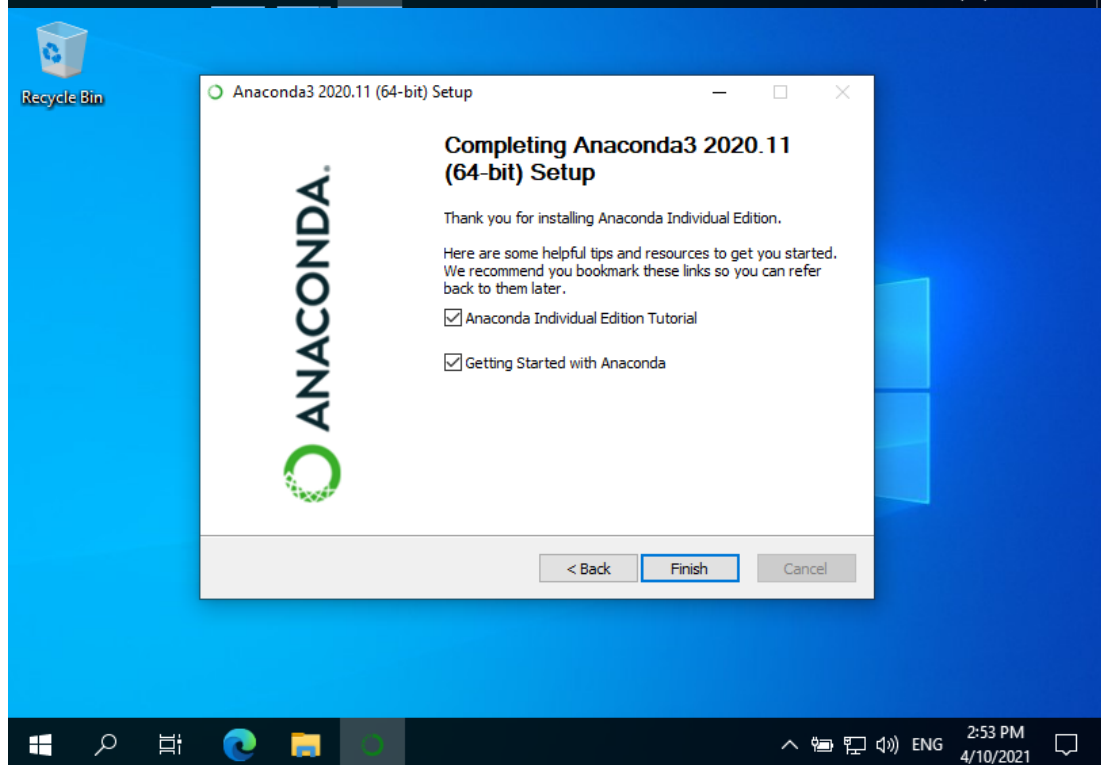

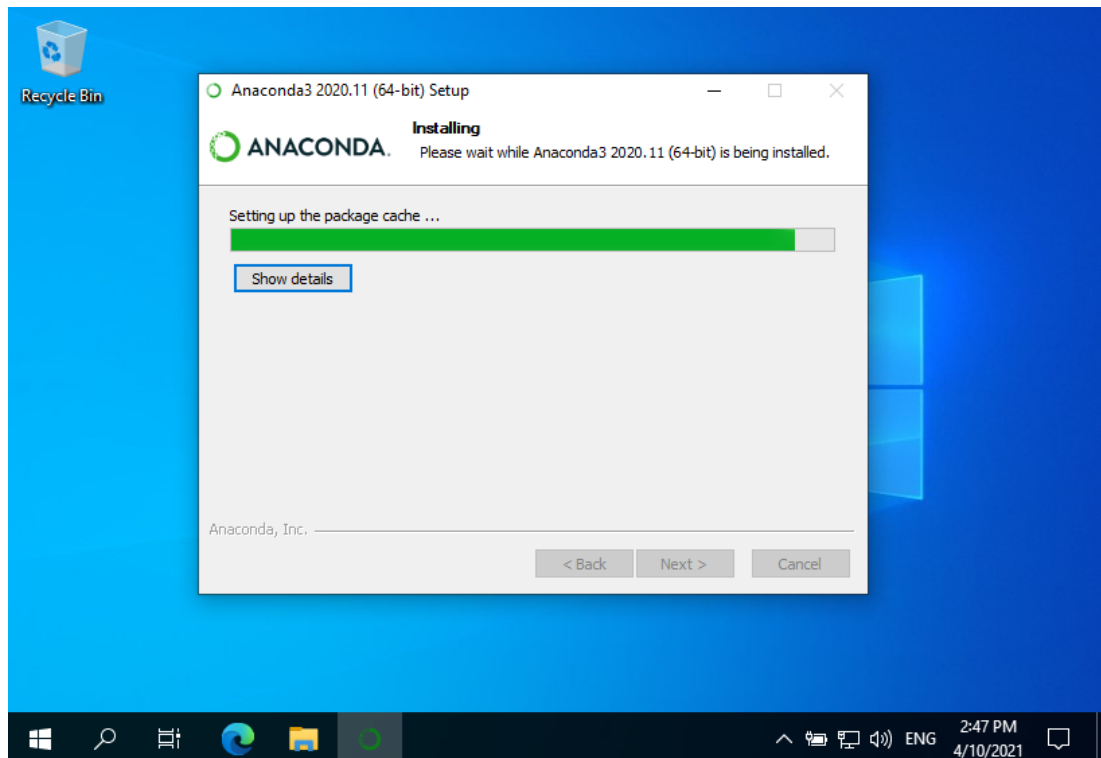

1. Anaconda is available for multiple platforms. [You can download it here](https://www.anaconda.com/products/individual).

2. You can use the default installation settings. On Windows they'll look like this:

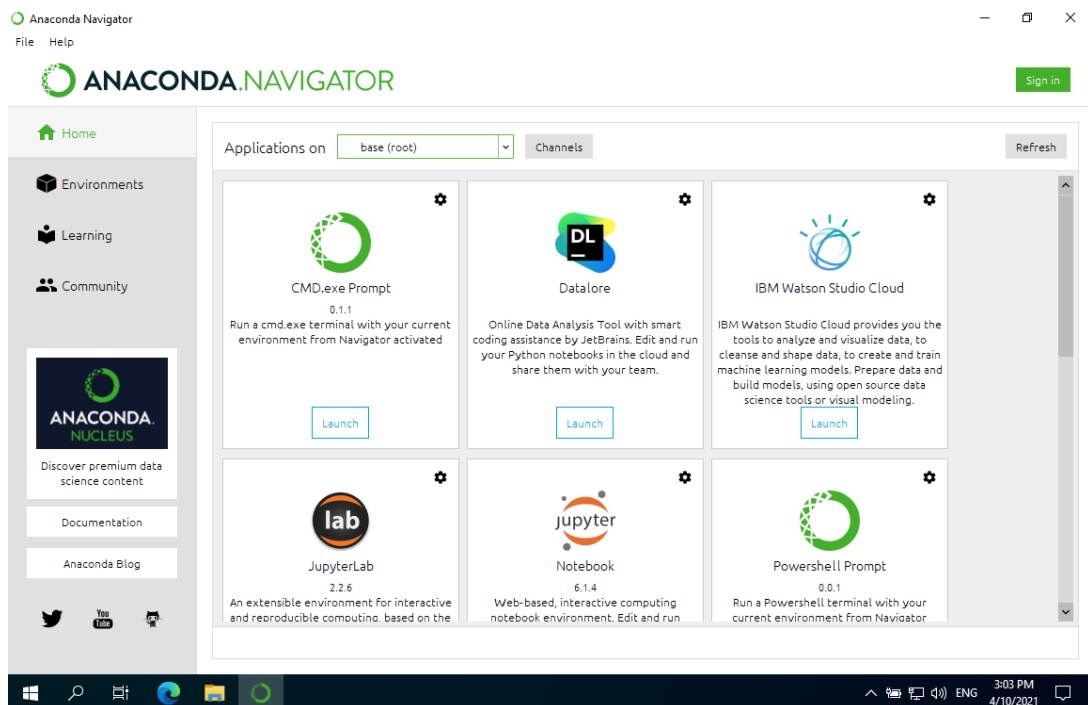

Creating the virtual environment “QWorld”

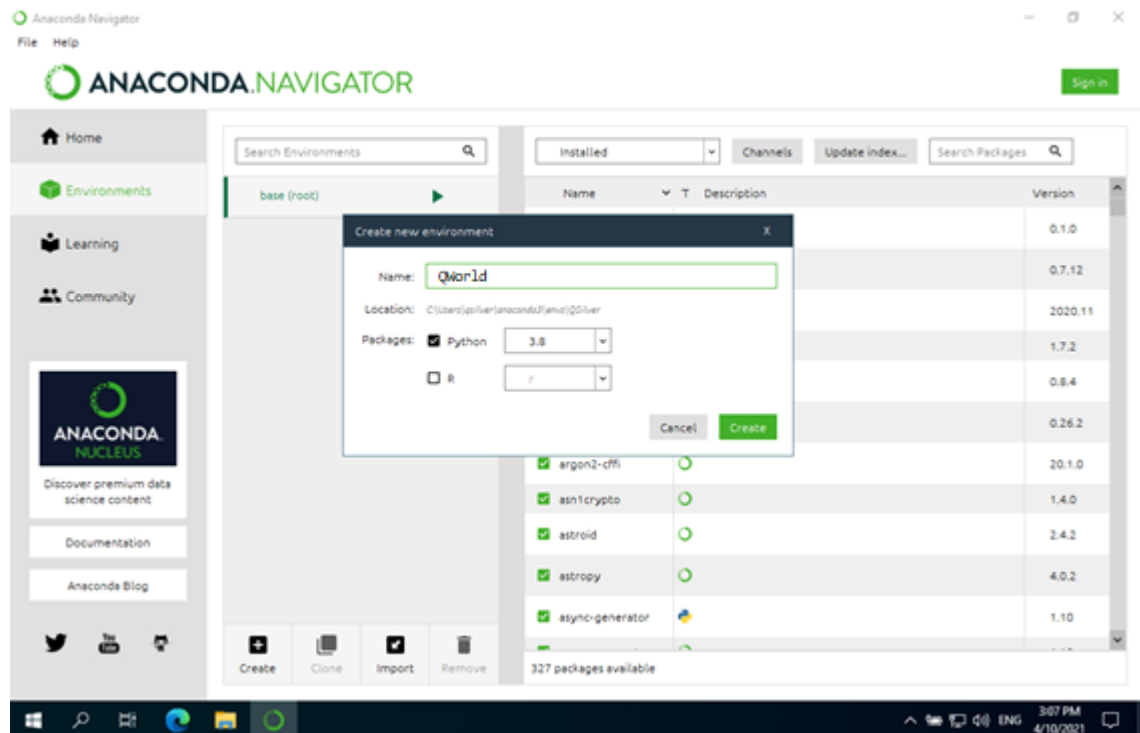

1. Start the *Anaconda Navigator*. In Windows you can find it in the Start Menu:

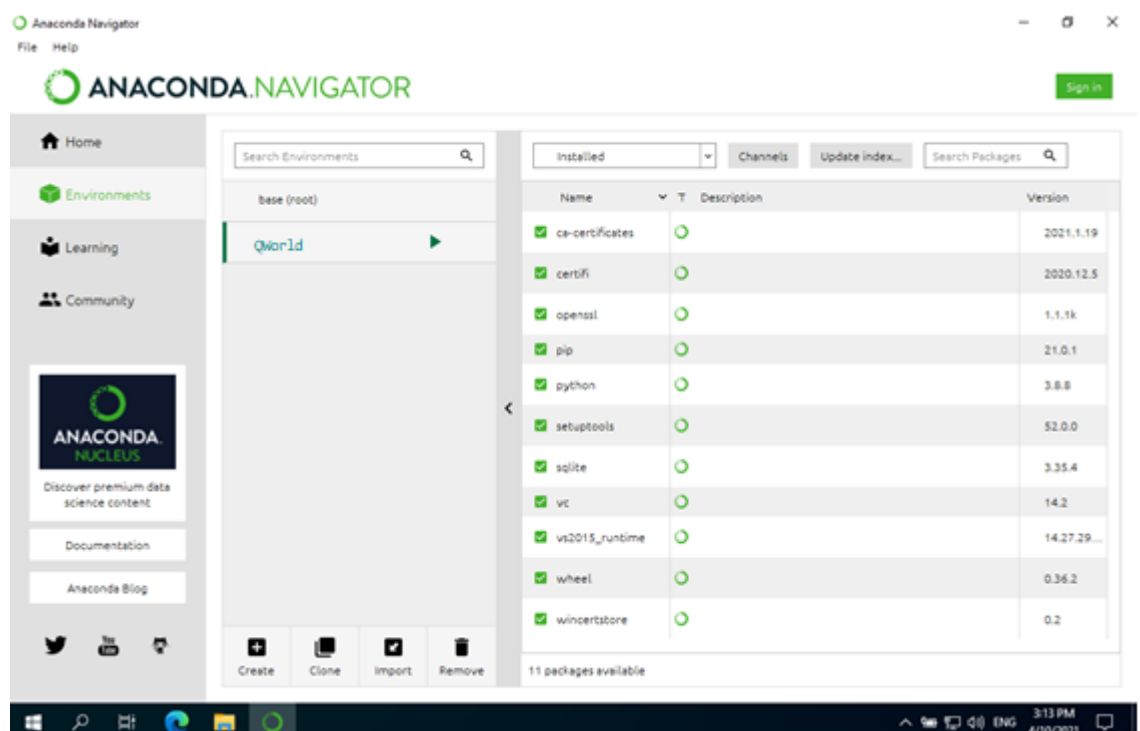

2. Once started, *Anaconda Navigator* will show its *Home* tab.

3. Select the *Environments* tab on the left. And click on the *Create* button on the bottom. Fill in “QWorld” in the environment name and click *Create*.

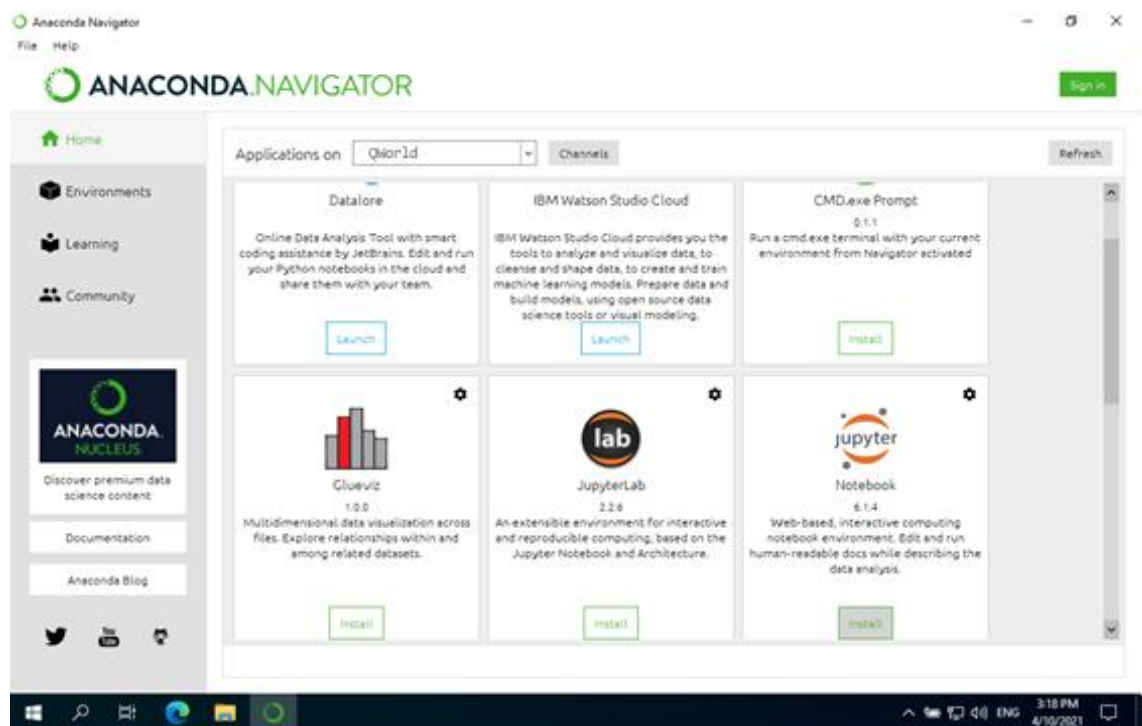

It'll take a while until the creation is completed. Once ready, you'll see a new environment “QWorld” in the middle pane of *Anaconda Navigator*:

Installing *Jupyter Notebook* in the “QWorld” environment

1. Go back to the *Home* tab. Make sure that “QWorld” is selected in the drop-down menu where it says “Applications on.” If everything looks OK, click the *Install* button on the *Jupyter Notebook* card.

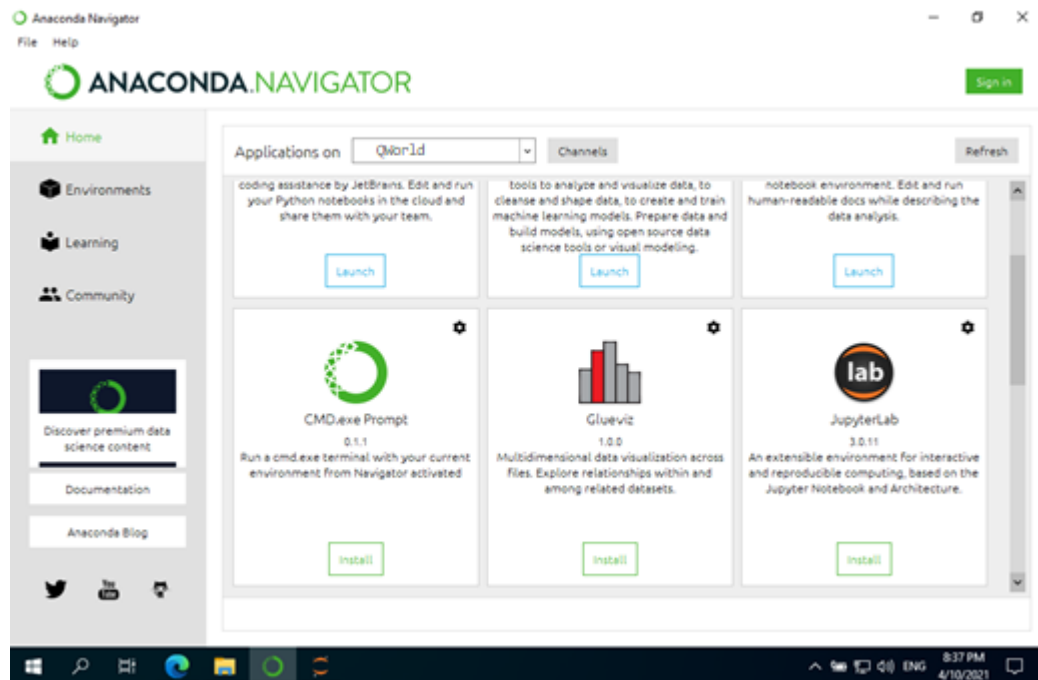

It will take a while to complete the installation.

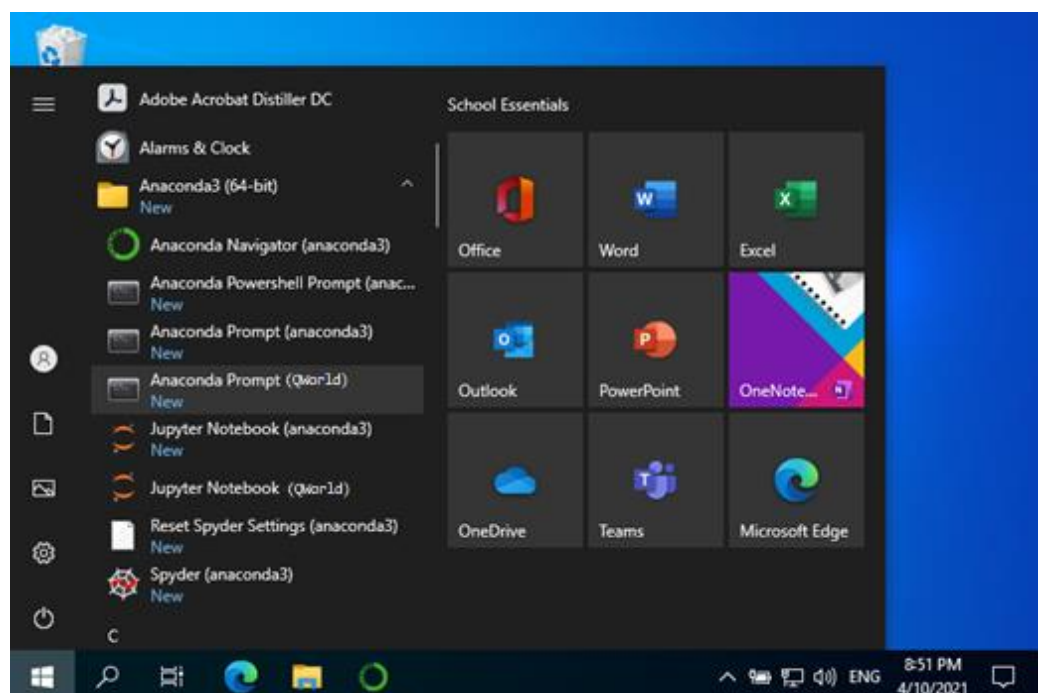

Enabling the *Anaconda Terminal* in the “QWorld” environment (optional)

You should be able to install all dependencies and use the materials from *Jupyter Notebook* alone, however, you might find it useful to have means to manage the “QWorld” virtual environment from the command line.

1. Select the *Home* tab, make sure that the “QWorld” environment is selected in the drop-down menu on the top. Find the card “*CMD.exe Prompt*” and click “*Install*.”

After this a new menu item, *Anaconda Prompt (QWorld)* will be available in the *Anaconda3* folder in the Start Menu:

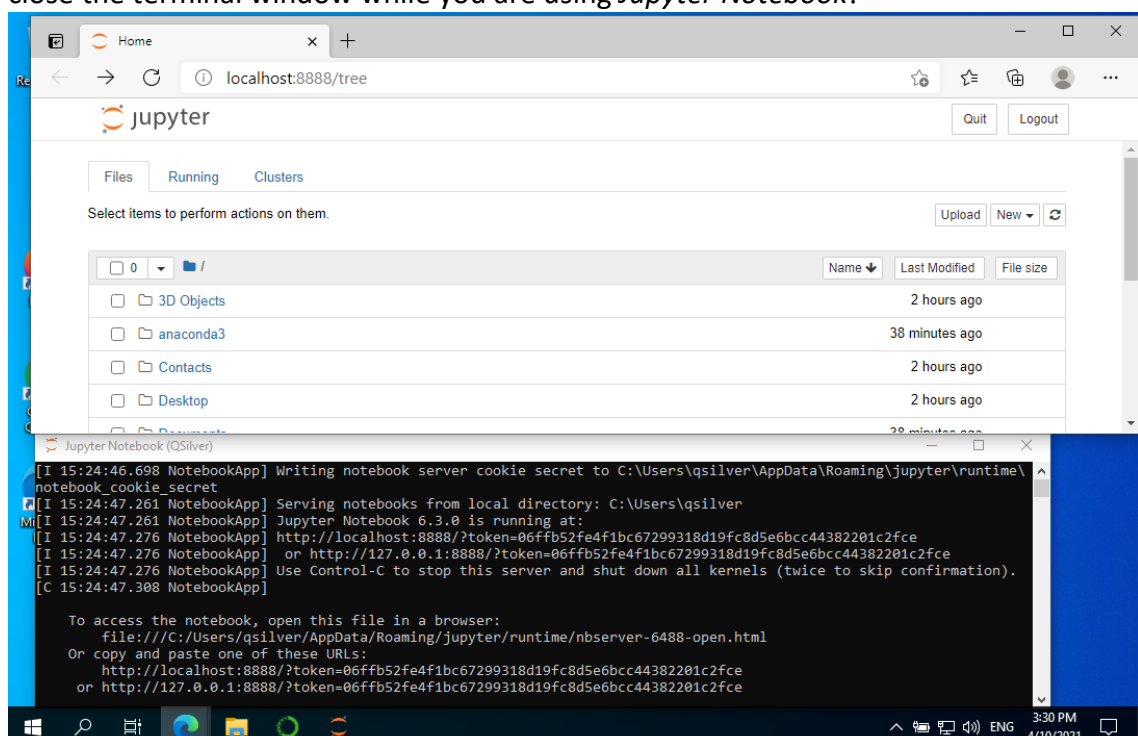

Starting Jupyter Notebook

We recommend starting Jupyter Notebook in a separate virtual environment named “QWorld.”

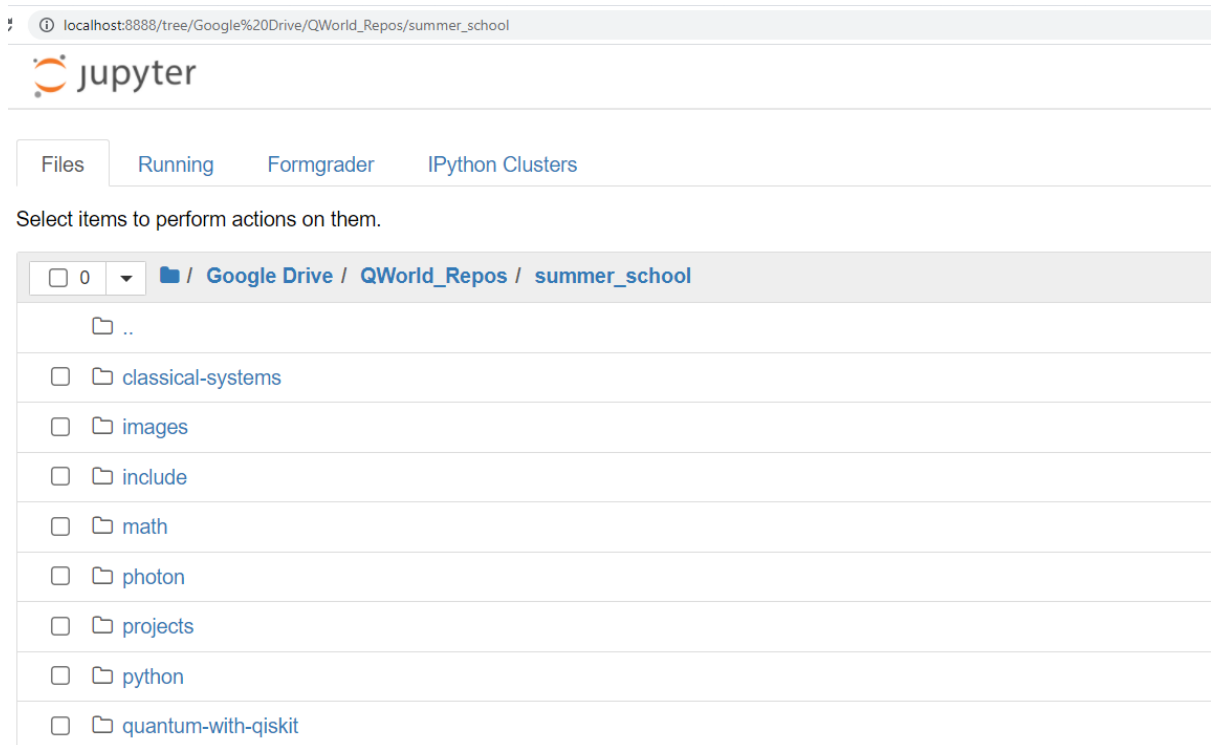

1. If you followed the instructions above, a new item “Jupyter Notebook (QWorld)” will be available in Start Menu under the *Anaconda3* folder:

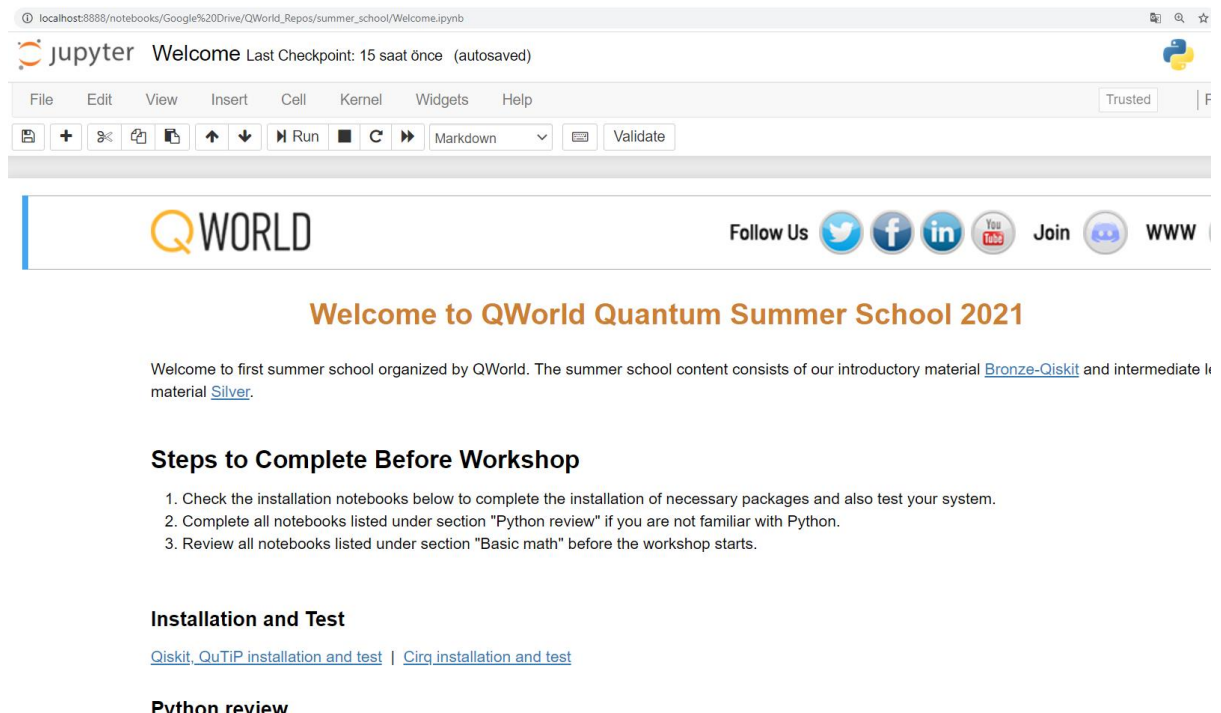

2. Once you click in this item, the *Jupyter Notebook* server will be running in a terminal window, and your browser will be instructed to open the graphical interface. Do not close the terminal window while you are using *Jupyter Notebook*!

3. Navigate to the folder where you have downloaded the materials to:

4. Open the file “welcome.ipynb”

Now you should be ready to proceed with installing the required python libraries!
